"Complete solution for Fire & Safety"

ILLEGRO,

CONFINED SPACES AND CONFINED SPACE VENTILATION

WHAT IS CONFINED SPACE?

- An area large enough for an employee to enter and perform work.
- Has limited or restrictive means of entry or exit.
- Is not designed for continuous human occupancy.

PERMIT-REQUIRED CONFINED SPACE

- Contains, or has the potential to contain, a hazardous atmosphere.
- Contains material with the potential for engulfment.
- Has an internal configuration such that an entrant could be trapped or asphyxiated by inwardly converging wall, or a floor which slops and tapers to a smaller cross-section.

TYPICAL CONFINED SPACES

- Storage tanks
- Pump waste wells
- Degreasers
- Manholes
- Tunnels
- Underground vaults
- Boilers
- Railcar tanks

- Silos
- Vessels
- Grain elevators
- Mixers
- Water tanks
- Bottom access enclosures
- Chemical process tanks
- Centrifuges

WHAT MAKE S CONFINED SPACE DANGEROUS?

- By-products of previously stored or processed materials and/or chemicals
- Accidental leaks or spills
- Chemical reactions
- Oxidation
- Mechanical operations
- Atmospheric hazards

ATMOSPHERIC HAZARDS

- Atmospheric hazards are often the most dangerous hazards in confined space work. An atmosphere which exposes the employee to risk of heath, incapacity, injury and/or acute illness can result from any of the following:
 - Oxygen deficiency, below 19.5%.
 - Oxygen enrichment, above 23.5%.
 - Flammable or combustible gases and/or vapors.
 - Dusts that obscures vision at 5 ft. or less.
 - Any IDLH atmosphere, poses immediate threat to life or severe health effects which could impair escape.

HAZARDOUS ATMOSPHERE ONLY CONFINED SPACE

- If the only hazard posed by a confined space is an actual or potentially hazardous atmosphere, and it can demonstrated that forced air ventilation alone is sufficient to maintain a safe atmosphere, then the full requirements of a Permit-Required Confined Space do not have to be met.
- The air must be monitored before and during the occupation of the confined space –

Oxygen content (19.5% - 23.5%)

Flammable gases and vapors (less than 10% LEL)

Potential toxic air contaminants (less than PEL)

SELECTING THE RIGHT VENTILATION UNIT

- 1. How to determine the size of the area that needs to be ventilated?
 - Step. 1: Get length, width, and height of the area in feet to determine volume.
 - Step. 2: Calculate in feet: Length x Width x Height = Total

<u>Note</u>: If you have cubic meters, multiply volume by **35.315** to convert to feet.

Step. 3: Divide total by $\mathbf{3}$ = CFM requirement

2. The Work Environment

Are there any toxic or explosive vapors present? If so, explosion-proof equipment might be necessary.

3. Work To Be Performed

- Welding Coating Remediation General ventilation
- Cooling Blasting De-contamination

4. Physical Limitations

Where will the ventilation units be placed? Will duct, connectors, elbows, or Saddle Vent[®] be needed to ventilate work area?

Saddle Vent[®] is a registered trademark of Air Systems International, Inc.; the Saddle Vent[®] device is protected by U.S. Patent Nos. 4,794,956,4,982,653, and foreign patents.

5. <u>Type of Power Source Available</u>

- A. Electricity Must specify voltage and frequency (ex: 220 V / 60 Hz)
- B. Compressed Air
- C. DC Power 12 Volt
- D. Gasoline powered
- (Note: Not to be used in work areas containing explosive vapors).

3 TYPES OF VENTILATION BLOWERS

AXIAL BLOWERS

• Ranges: 778 to 7500 CFM

Radcrops

- Explosion proof available
- 115V/AC (some 220V 50 HZ) and 12V/DC
- With or without ducting canister 15 ft. (4.m) and 25 ft. (7.6m).
- Optional 8, 12, 16, 20 inch ducting.
- Optional inlet adapter to extract air, as well as ventilate.

CENTRIFUGAL BLOWERS

- Ranges: 760 to 3000 CFM
- ABS housings are lighter weight and offer greater durability.
- Some are offered in 220V
- Gasoline powered. (includes 10 ft. exhaust hose).
- Air-Driven (requires 30 CFM @ 40PSI)
- Explosion proof available
- Two speed available.

VENTURI BLOWERS

- No Moving Parts.
- Lightweight construction.
- Explosion proof.
- No guards required.
- Fairly inexpensive.
- Multiple inlet ports.
- Sturdy galvanized steel diffuser.
- Static ground wire included.
- Single piece cast aluminum inlet housing.

CONFINED SPACE ACCESSORIES

- Manhole Guard Rail and Shield.
- Manhole Guard Rail Tent
- Worksite Umbrellas
- Manhole Lid Lifter
- Dewatering pumps
- Work area tents
- Tent Heater

Radcorps Fire & Safety Pvt Ltd

Corporate Office: 303, Foundation Tower, Sector 11, CBD Belapur, Navi Mumbai – 400614, Maharashtra, India.
